

# BrightBytes EdTech Impact PowerSchool Integration

The EdTech Impact solution from BrightBytes allows districts to measure student usage and the impact of education technology within their organization. A key component of the EdTech Impact platform is our integration with your Student Information System, PowerSchool.

## Integration Overview

### PowerSchool

**Integration Type:** API or Data Extract

**PowerSchool versions supported:** All

**Configuration Method:** PowerSchool  
Plugin or Export Manager

**Plugin Release to Customers:** BrightBytes  
Installed or Transmitted to District Via Email

## PowerSchool Integration Options

### PowerSchool Plugin

The BrightBytes team has co-developed a PowerPlugin with a PowerSchool ISV partner which provides rich data supplementing your student usage information. This PowerSchool plugin can be installed via two separate methods based on the district's preference.

- The BrightBytes Integration Engineering team can install and configure the plugin with access to the **Plugin Management Configuration** utility.
- The BrightBytes Project Management team can send a copy of the PowerSchool plugin to the district for installation. The generated key and secret can be communicated via a secure vault.

### Data Extract

The BrightBytes team can also provide a secure method for automated delivery of an automated extract configured through the **PowerSchool Export Manager** if that is the district preference.

### Data Sets Acquired

- Calendar
- Schools
- Sections
- Staff
- Student Section Association
- Students
- Student Assessment (if applicable)
- Student School Enrollment
- Student Tags (student program data)
