

# QUICK REFERENCE GUIDE

## MSIS Webpage

Go to: [www.mdek12.org/msis2.0](http://www.mdek12.org/msis2.0)

The original Mississippi Student Information System (MSIS) was created in 2000 to meet the data collection and reporting needs of the state's public school districts and the Mississippi Department of Education (MDE). (The reporting obligations came from state and federal funding authorities in addition to other legal/regulatory requirements.) In the years following MSIS's launch, data collection and reporting demands placed on the system outpaced its capacity to handle them. In 2019, the MDE began an effort to document existing and anticipated stakeholder needs to prepare for the development of a modernized student information system: **MSIS 2.0**.

MSIS 2.0 is designed to provide better and near real-time data to more users in user-friendly ways. Since the project began in 2019, stakeholders have been hearing about the new MSIS 2.0, and many have participated in review and feedback sessions for the system's design. MDE invites schools and districts to **join us on the hunt for the new MSIS 2.0** during the 23-24 school year as we discover different features and functionalities of MSIS 2.0 in preparation for the full release in the summer of 2024! Use the links below to keep up with upcoming events and training resources.
