# School Nurse Assessment

---

MISSISSIPPI  
DEPARTMENT OF  
EDUCATION

Ensuring a bright future for every child

## **Introduction**

Since the 2007 Legislative Session, the Mississippi Department of Education (MDE) has been responsible for the administration and supervision of the school nurse program in Mississippi (MS) public schools. The program is known as the "Mary Kirkpatrick Haskell-Mary Sprayberry Public School Nurse Act of 2007" (37-14-7) or School Nurse Intervention Program. This report is intended to meet requirements of this act and to analyze the progress that is being made within MS public schools through this health services model.

This report provides specific school nurse information such as numbers and locations with comparison data. It looks at the challenges of school nurses, and data specific to the clinical aspect of school nursing. The Office of Healthy Schools directs the progress of this program by providing training, resources, partnerships, and a performance measure data summary reflected through monthly reporting. This report is made up of data reported for August 2014 through December 2014.

School nurses advance the well-being, academic success, and life-long achievement of students. Their role is also critical to the health and success of teachers, as well as, contributing to the overall goals of the MDE.

## **School Nurses**

Thanks are directed to the Mississippi State Legislature for their support of the school nurse program. Some progress has been made this year with an increase in the total number of nurses (25). In Table 1 you will find trending data for 2010-2015. The MS Board of Nursing defines a "School Nurse" (SN) as a Registered Nurse (RN). The Licensed Practical Nurse (LPN) has a role in the school setting but must be supervised by an RN. In an attempt to better understand the work at hand, the full time equivalent (FTE) data consists of RN data only, resulting in smaller rate of growth (6.63) for the 2015 FTE, when compared to the increase in RNs (25). The gap between nurse growth and FTE growth is (27%) in 2015. Although the FTE was higher in 2015, the gap results in a nurse to student ratio that has improved but remains well above the national standard of 1:750. When students have chronic health issues a more realistic ratio would be even lower. Mississippi does not have a state standard.

## **National Certified School Nurses**

Registered nurses with a bachelor's degree or higher are eligible for a \$6,000 annual salary supplement following completion of the National Certification Examination for School Nurses (NCSN). Mississippi currently has 47 NCSN nurses with 38 eligible for the supplement. There is a cap at 35 slots for school nurse certification. There are opportunities throughout the year for school nurses to sit for the exam. School nurses that are currently enrolled in bachelor nursing programs will be eligible to sit for the certification exam within the next year. Currently there are three school nurses on the

waiting list for supplement; the expectation is that this list will see more growth before the end of the year.

## **Challenges**

National trends have included the elimination and or decrease in School Health Services. MS has also seen this happen for some school districts. This is reflected in the FTE. There are districts that have decreased services, or realigned services through the utilization of more part-time nurses or a lesser qualified nurse category. The part-time nurse is less likely to have a commitment to the whole school community, resulting in limited ownership of school health initiatives.

School nurses (61%) participated in data collection this year. The data reported reflects 66% of school districts and 73% of the student population. The key elements of SN data include health promotion encounters with students, incidence of chronic disease, and SN demographics. These data clusters are slightly different from previous years, but will allow us to compare Mississippi's school nurse program with other states.

The number of students with chronic diseases remains at high levels resulting in a high acuity level of care needed. MS remains a state with a large student to nurse ratio at 1:1114. Improvement in this ratio has not been seen since 2011. The ratio rank assessment in MS has remained consistent since 2008, including the following categories: National Standard  $\geq 1:750$  students, Vulnerable  $171 \leq 1500$  students, and Extreme  $1501 \leq$  students. When applying this measure to our current ratio there is more work to done to move from vulnerable to the national standard. Consideration also needs to be given to the number of school campuses that a SN is assigned. In a recent survey of school nurses, evaluating the MS School Nurse Procedures and Standards of Care manual, 25% of School Nurses reported working within an ideal workload consisting of a standard ratio and one campus. Nearly half (48%) of the school nurses surveyed reported an extreme workload with multiple campuses and a very large population of students. The SN services available for students is reflective of the workload. Even with the challenges of ratios, campuses, and chronic diseases, school nurses continue to provide services for students, parents and families, and school

personnel, often at multiple school sites. Please find the supporting data included in this report.

## **School Districts Without a School Nurse**

The list below indicates all districts that do not have a school nurse. This list has increased by two this year when compared to the two previous years. Shaw and Hinds AHS were removed from the list due to consolidation of districts. Booneville and Durant have experienced an elimination of services by community organizations who were sponsoring the school nurse program. Jefferson Davis and Lawrence County were not awarded the SNI grant resulting in the closing of the school nurse program in their district.

The following are districts with no school nurse in the district:

- 1) Attala County School District
- 2) Booneville School District
- 3) Clay County School District
- 4) Coahoma County AHS
- 5) Durant School District
- 6) Enterprise School District
- 7) Jefferson Davis County School District
- 8) Kemper County School District
- 9) Kosciusko School District
- 10) Lawrence County School District
- 11) Quitman County School District
- 12) Webster County School District
- 13) Yazoo City School District

## **Funding/Appropriation Options**

Schools continue to use a variety of sources to fund school nurses. This diversity has been cited in national publications such as *Charting Nursing's Future-A Robert Wood Johnson Foundation publication* (August 2010). The funding streams for the school nurse program, come through legislative grants, district funds, federal funds, and specific Medicaid programs. These streams are noted below:

- District funding/MAEP funding
- Federal funding
  - Title programs
  - IDEA
- Legislative appropriation/School Nurse Intervention Program
- Hospital/local clinic/Regional Mental Health funding
- Medicaid reimbursement
  - Mississippi Cool Kids (EPSDT)
  - School-Based Administrative Claiming (SBAC)

- Other grants

The state ratio of 1:1114 is calculated using student enrollment (490,650) and the FTE (440.4). The national standard of one school nurse for every 750 well students (1:750) is the recognized standard as agreed upon by the National Association of School Nurses and the American Academy of Pediatrics. This general ratio provides for school nursing services to be available all day, every day, for every student. Based on student enrollment, MS would need a total of 654 school nurses to reach a statewide average nurse to student ratio of 1:750. This equates to 205 additional school nurses at a cost of \$102,500,000 (\$50,000 each). Careful attention to the necessity of dependable funding sources will help to sustain and improve school nursing services. The health and ultimately educational success of students are dependent on these services.

## **School Nurse Data**

School nurses report data each month to document the responsibilities and functions of their positions. School nurses are providing educational opportunities in a variety of settings such as the classroom, staff development, parent organizations and community groups. Data show the educational presentations of tobacco education (54%), fitness (7 %), and nutrition (6%). This is the first year that sex related education (SRE) was reported by school nurses. They taught 1126 sessions of SRE or (4%) of the presentation made. These sessions reached 15,669 students. Over all, this data indicates that the school nurse is bringing important and timely health information to students.

The data continues to show an alarming number of encounters with students to manage chronic diseases. The special procedures category notes the number of student visits requiring a specific procedure. Diabetes accounts for 61% of the encounters recorded, followed by Oxygen Saturation test at 9%, Nebulizer treatments for asthma at 6%, and Urinary Catheterizations at 6%.

Most of the chronic health categories have been stagnant for several years. Asthma and Diabetes require school nurse expertise and management in the school setting. Of 15,502 students with a chronic disease, asthma continues to be the most diagnosed at 48%, with diabetes at 4%. Comparing the number of procedures associated with diabetes (61%) and the number of reported diabetes diagnosis (4%) the converse is true for asthma related procedures (6%) and asthma diagnosis (48%). Both asthma and diabetes require special nursing management that could be over looked because of the lower numbers of students or procedures. When considering the work of the school nurse both student numbers and procedure numbers should be complied to determine student acuity levels.

In the case of health screening for 141,617 students, the results include vision (37%), hearing at 23%, growth measurements at 5% and dental at 5%. Again, vision is the

number one educational health disparity as identified by Centers for Disease Control and Prevention.

The data collection reported by school nurses is intended to describe the many functions of a school nurse. During the first semester there have been 556,379 clinical encounters, 24,951 educational encounters, and 141,617 screening encounters. Each FTE school nurse in MS has already seen 1641.5 students/staff this semester. This data verifies that school nurses work diligently regardless of the challenges of high ratio and multiple school sites, to impact the health of the students they serve. They are a necessary component to student success in the classroom and beyond.

The SN grant award process has changed this year to include a competitive applications. Prior to this process most of the districts receiving the funds had received them for 15 years without competition, creating an entitlement mentality. There were 25 districts that did not receive the new awards for the 2014-15 school year. Eight of the districts that had previously received this funding did not apply for consideration in this process. Another 17 districts were not awarded based on application scoring. Of the 25 districts that were accustomed to the funding 23 found other funding to support the school nurse program allowing the school nurse to remain in place.

*The information included in this report was compiled through information submitted through the Mississippi Student Information System (MSIS) and through telephone interviews with school district personnel. Information has been considered for all school districts.*
